Learning

We honor the ideals of liberal education, aiming to prepare students to be lifelong learners and contributors to global intellectual life.
Creating

We strive to create a vibrant intellectual community where students and scholars promote path-breaking endeavors in all fields of knowledge.
We are committed to sharing our values and knowledge to promote peaceful co-existence with others on the world stage.
This year, Seoul National University celebrates its 73rd anniversary. Our school represents the Republic of Korea as its premier institution of higher education and has a proud tradition of leading our nation’s development and prosperity.

The recent development of science technologies and political, social, and economic environments presents inevitable challenges to higher education. Seoul National University is embracing them and making necessary innovations.

Seoul National University will educate leaders who appreciate the value of original thinking and also of sharing and compassion. We will seek out the undiscovered pearls of talent from every corner of our nation and help them realize their true potential.

We will pursue original research that can open up new intellectual vistas, solve the difficult problems of society, and help institute feasible policies for the collective good, forging a path to the future that the whole world can follow.

With your earnest support, Seoul National University will become an ideal intellectual community.

Sincerely,

Se-Jung Oh
President
Seoul National University
SNU People and Achievements

The definitive textbook on the Korean history

A New History of Korea, the first English-language history of Korea published by Harvard University Press in 1984, was written by LEE Ki-baik (class of 1947, History). Since its first publication in Korea in 1961, it has generally been regarded as the most authoritative full history of Korea.

Graphene technology

According to many experts, graphene is a ‘miracle material’ that can change the future computers forever. Harvard Professor KIM Philip (class of 1990, Physics) is the one who made the breakthrough in graphene research. Dr. Andre Geim who won the 2010 Nobel Prize in Physics for his graphene research said, “Philip made an important contribution and I would gladly have shared the prize with him.”

Hantavirus Vaccine

Hantavirus hemorrhagic fever with renal syndrome, which had threatened Korean and American soldiers in the 1950s with a 10% mortality rate, was identified by virologist LEE Ho Wang, M.D. (class of 1954, Medicine), after two decades of research. Lee found the virus in 1976 and made the first vaccine in 1988.

Korea’s first test-tube babies

Korea’s first test-tube babies, a pair of twins, were born at SNU Hospital with the help of Professor CHANG Yoon-suk (class of 1955 and faculty member 1961-1996, Medicine) in 1985, seven years after the world’s first. Since Chang’s success, Korean infertility treatment has rapidly developed to the world-class, with a success rate reaching 40%.

World’s first printed book

JIKJI is the world’s oldest extant printed book. It was first printed in 1377, 78 years prior to Gutenberg’s Bible. The book had been missing for nearly two hundred years in a misclassification of a French library until Dr. PARK Byeong-sen (1923-2011, class of 1950, History Education) found it after 13 years of persistent search. The copy was inscribed on UNESCO’s Memory of the World Register as the world’s oldest metalloid type in 2001.

1988 Seoul Olympic Games

The 1988 Summer Olympics was a pivotal event for Koreans to present the country’s development to the world. The games were participated in by the largest number of nationalities in history until that time, and the director of the opening and closing ceremonies of the games was LEE O Young (class of 1956, Korean Literature), the Minister of Culture and a distinguished critic of literature.

The New Community Movement in the 1970s

Saemaul Undong (New Community Movement) was a community-driven development program in the 1970s that contributed to the successful modernization of rural Korea. The living in the countryside was improved and the greater infrastructure was developed. Philanthropist and scholar KIM Jun (1926-2012, class of 1949, Agriculture) was the founding father of the movement.

Economic prosperity in the 1980s

During the 1980s, the Korean economy made unprecedentedly strong and stable growth, shifting from a government-led system to a market-oriented economy. It had a nearly 10% average annual growth, while inflation stayed below 3% from 1983 to 1987. Chief Economist KIM Jae-ik (1938-1983, class of 1960, International Relations) was the architect of this turn-around.

Leading global businesses

Samsung Electronics and Hyundai Heavy Industries, the leading global businesses in mobile devices and shipbuilding, are run by LEE Jae-yong (class of 1992, Asian History) and CHUNG Mong-joon (class of 1975, Economics), respectively.

K-Pop stars

S.M. Entertainment is home to globally popular K-pop singers EXO, Girls’ Generation, Super Junior, SHINee, TVXQ, and many others. LEE Soo-man (class of 1978, Agriculture Machinery), who himself was a singer-songwriter is the founding CEO of the company.

Changing red mountains into green

Until the early 1960s, the mountains covering over 70% of Korean peninsula were treeless due to the war. This caused massive floods every year. Thanks to the forest breeding science developed by Professor HYUN Sin-Kyu (1911-1986, faculty member 1965-1976, Forest Science), the mountains turned into deep green forests in less than two decades. Hyun genetically developed high quality trees that grow quickly in Korea’s natural environment, namely the Rigitaeda hybrid pine tree and the Hyun Popular.

A scientific solution to food shortage

Tongil Rice is a breed of rice customized for Korea’s relatively cold farmland. It was created as a solution to the serious food shortage in Korea in the 1970s by Professor HUR Mun-hoe (1927-2010, class of 1954 and faculty member 1960-1990, Agriculture). The wide distribution of Tongil rice increased the national rice production by 147% and made Korea self-sufficient in food by 1976.

Successful entrepreneurs

NAVER, Korea’s biggest web portal that boosts almost 80% of the search market, and Kakao Talk, Korea’s most popular mobile messenger used by over 100 million people, were created by LEE Hae-Jin (class of 1990, Computer Science) and KIM Beom-su (class of 1990, Industrial Engineering), respectively.

Semiconductor pioneers

Korea is leading global semiconductor industry by initiating new technology: 16M DRAM developed by Chin Dae-je (class of 1977) in 1991, the world’s first 84M DRAM by KWON Oh-Hyun (class of 1975) in 1992, and also the world’s first 256M DRAM by HWANG Chang-gyu (class of 1976) in 1994. The pioneers are all from the Electronic Engineering.

K-Pop stars

S.M. Entertainment is home to globally popular K-pop singers EXO, Girls’ Generation, Super Junior, SHINee, TVXQ, and many others. LEE Soo-man (class of 1978, Agriculture Machinery), who himself was a singer-songwriter is the founding CEO of the company.

UN Secretary-General BAN Ki-moon

“Since graduating, I have felt an enormous debt of gratitude to SNU for the way it prepared me for what was to come,” said BAN Ki-moon (class of 1970, International Relations), the 8th Secretary-General of the United Nations.

UN Secretary-General BAN Ki-moon

“Since graduating, I have felt an enormous debt of gratitude to SNU for the way it prepared me for what was to come,” said BAN Ki-moon (class of 1970, International Relations), the 8th Secretary-General of the United Nations.

UN Secretary-General BAN Ki-moon

UN Secretary-General BAN Ki-moon

“Since graduating, I have felt an enormous debt of gratitude to SNU for the way it prepared me for what was to come,” said BAN Ki-moon (class of 1970, International Relations), the 8th Secretary-General of the United Nations.
1895–1945

Creation of modern higher education system

Korean Emperor Gojong established the modern higher education system to promote the nation's independence.

1895 Legal Training School and Hansung Normal School established
1896 Medical School established
1901 School of Agriculture, Commerce, and Engineering established
1904 Nursing Education Division of Great Han Medical Center established

1945–1950

Founded as the premier national university

Seoul National University was the first comprehensive university of Korea, aiming to produce intellectual elites who would lead the newly liberated country.

Aug. 15, 1945 Korea was liberated from Japan after 36 years of colonial rule
Aug. 22, 1945 Ordinance on the establishment of Seoul National University promulgated
Oct. 15, 1946 Seoul National University opened with 9 Colleges and 1 Graduate School

1950–1960

Reconstruction after War

The University rapidly recovered with the aid from countries all over the world and the nation's desire for education.

1954–1962

Minneapolis Project for reconstruction and development of Seoul National University. 9,791,000 USD of financial aid given, and 218 SNU professors sent to universities in the US. Most of the aid was given in the fields of agriculture, engineering, medicine, and public administration

Feb. 18, 1955 Unified emblem of the university created
Jan. 13, 1959 10 departments were created with an admission quota of 1,440 added

1960–1975

Impacting national development

SNU community members spearheaded the democratic movements, while graduates played a central role in the economic development.

Apr. 19–26, 1960 SNU community members led the April 19th Revolution against the dictatorship
May 23, 1960 The 2nd SNU student council organized
Apr. 15, 1961 Academic year changed from April – March to March – February
1962-1973 Professional Graduate Schools newly established or expanded: Graduate School of Judicial Research & Training (1962-1970), Graduate School of Education (1963-1975), Graduate School of Business (1965-1971), Graduate School of Mass Communication (1967-1975), Graduate School of Environmental Studies (1973), Graduate Schools of Public Administration and Health (expanded)
Feb. 12, 1969 Seoul National University Alumni Association first established
Apr. 2, 1971 Construction of the newly integrated campus in Gwanak initiated

1975–1980

Centralizing the campus in Gwanak

SNU merged its multiple campuses into three main locations: Gwanak main campus, Yeongdong medical campus, and Suwon agricultural campus.

Feb. 25, 1975 Education units reformed: 13 colleges, 1 graduate school, and 6 professional graduate schools before 1975.
Three colleges for general studies, 12 colleges for specialized studies, and 3 professional graduate schools after 1975.
Mar. 1, 1975 Colleges of Humanities, Social Sciences, Natural Sciences, Business Administration, Law, Education, and Home Economics relocated to Gwanak campus
Jan. 10, 1980 College of Engineering relocated to Gwanak campus, which completed the first stage of relocation. Later, the College of Agriculture and Life Sciences and the College of Veterinary Medicine moved to Gwanak in 2003, and the Graduate School of Public Health relocated to Gwanak in 2010.

1980–1995

Moving toward democracy

After a long struggle for democracy, the university became stable and the number of students and faculty increased.

1981 Special admissions for international students first offered
Apr. 4, 1983 SNU’s official insignia designated as the Zelkova tree and Crane
Sept. 26, 1984 SNU student council re-established
1985 Number of students doubled in ten years: from 16,146 students in 1975 to 32,395 in 1985
1987 - Feb. 1989 Decision to abolish military training course from 1990
Aug. 14, 1991 Professor KIM Chong-un elected as SNU’s president. It was the first direct election involving all faculty members

1995–2011

Rise to global prominence

SNU set an aim to become a world-class research university, and many research institutions were established,

May 31, 1995 Plan for Education Reform in Preparation of Globalization and Digitalization Age announced by the government
Mar. 11, 1999 Brain Korea 21 (BK21) project, a 140 billion KRW plan to enhance global competitiveness of Korean research universities, launched by the government, and thirty SNU research teams were selected for the project
Mar. 2004 Percentage of female students exceeded 40% (42.8%) for the first time
June 25, 2007 International Summer Institute established
Mar. 1, 2009 College of Liberal Studies, School of Law, and Graduate School of Convergence Science and Technology opened
Apr. 2010 Placed 20th in the world in terms of SCI paper publications according to the analysis by Ministry of Education

2011 - present

Gaining autonomy from government

SNU community members had long been seeking true autonomy. In 2011, SNU finally changed its legal status to an incorporated entity.

Dec. 28, 2011 Seoul National University changed its legal status from a government organization to an incorporated university by law
Mar. 1, 2013 Number of tenure-track foreign faculty reached 100
June 12, 2014 SNU Pyeongchang campus, a bio-technology complex opened
Sept. 16, 2014 Placed 31st among world universities according to QS World University Rankings
Feb. 5, 2015 Opening of Kwanjeong Library made SNU library system largest in Korea

History

1895–1945

Creation of modern higher education system

Korean Emperor Gojong established the modern higher education system to promote the nation's independence.

1895 Legal Training School and Hansung Normal School established
1896 Medical School established
1901 School of Agriculture, Commerce, and Engineering established
1904 Nursing Education Division of Great Han Medical Center established
Educating the Whole Person

- **Creative minds**
- **Global Citizens**
- **Future Academics**

### Creative minds

- **An interdisciplinary course - Human Nature and the Good Life**
  This course is designed to enable students to better understand themselves and find their own answers to life’s important questions. Professors of philosophy, social science and natural science teach this course together to encourage students in their personal explorations of what a good life is.

- **Ethical Leadership Program**
  Students take this four-week capacity building program to upgrade themselves as civic-minded leaders. Taking each step of ‘establishing rules of life’, ‘overcoming a bystander attitude’, and ‘approaching neighbors’, they can develop their sense of good-will in order to have positive effects on society.

- **Voluntary Service Courses**
  SNU encourages students to serve the community by offering organized curriculum on voluntary service. In Voluntary Service Course I, students learn the basics of social service and join a designated community service project. In Course II, students create and lead their own projects. In Course III, students travel internationally to participate in global service initiatives.

### Global citizens

- **SNU in the World programs**
  Students can choose to study in one of the major cities of the world for six weeks during summer or winter term. The ‘SNU in the World’ programs are offered in Beijing, Tokyo, Berlin, Paris, Madrid, Washington DC, and Moscow.

- **International Summer Institute (ISI)**
  SNU invites students from all over the world to its international summer sessions. Foreign students have the opportunity to experience SNU’s academic life, taking in-depth courses in English taught by distinguished professors, and learning the Korean language and culture.

- **Global internship program**
  Senior students are eligible to participate in a global internship application tour. Selected students are invited to visit several leading global companies and organizations, where they are given opportunities to present their ideas and compete for internship positions.

### Future academics

- **Student Direct Education course**
  SNU offers ‘Student Direct Education’ courses, in which students can create their own topics of study and request professors’ guidance for independent study. Students are encouraged to present their findings at scholarly forums.

- **College of Liberal Studies**
  The creation of the College of Liberal Studies in 2009 was emblematic of SNU’s commitment to creativity in intellectual life. Students in this college are given freedom to choose an existing major or create their own unique major.

- **Support for future academics**
  SNU provides strong support to students who study further in basic fields. These fields, such as the humanities and natural sciences, form the foundation of academia. As of 2015, 263 students had received long-term aid for scholarship.

---

International Summer Institute class by Professor CHUNG Jae Ho
Cell Biology class by Professor KIM V. Narry
Creating Academic Values

Finding new forms of knowledge

- Unveiling the mystery of RNA
  KIM Vic Narry, professor of biological sciences, made a major contribution to the understanding of how microRNAs are created and processed in cells. Until recently RNA was considered to be merely a ‘messenger’ that delivers DNA information. She found RNA forms regulatory networks and has some control functions in cells.

- Challenges to measuring an absolute neutrino mass
  KIM Soo-Bong, professor of physics, built Korea’s first neutrino detector facility in the Yonggwang Nuclear Power Plant in 2011. Using this detector, Professor Kim successfully measured the previously unknown transformation rate of one neutrino to another neutrino. The measurement became a breakthrough in promoting the next round of neutrino research to investigate the remaining, mysterious properties of neutrinos.

Taking steps in new directions

- DNA scissors that can alter genes
  KIM Jin-Soo, professor of chemistry, developed a technology that can precisely cut off human DNA that causes mutation or diseases. He succeeded in creating super-muscular pigs by simple gene editing, which would otherwise have taken decades of selective breeding in nature.

Convergence

- Beyond academic borders

Impact

- on society

Making a change in society

- Research on the homeless
  KU In-Hoi, professor of social welfare, has conducted thorough research on the homeless for years – personal history, psychological features, and health conditions – to find the cause of persistent homelessness. His research has provided a theoretical foundation upon which to build a social safety net suitable for Korean society.

- Building a database of patient experience
  No matter how common a disease is, it presents a challenge to individuals who must suffer from it. KANG Chang-Uh, professor of German, built a narrative database of disease experiences interviewing over 300 patients and their families for five years, and shared it online. The database is not only visited by patients, but also used as part of the curriculum for medical students.

- A tiny robot that mimics water-strider’s movement
  An SNU research team created a mechanical insect that can mimic water-striders’ movements. The robot was as tiny as 68mg, but could jump up to 14cm 16 times in a row without complicated controls of artificial intelligence. Professors in the biological sciences observed water-striders’ extreme movements prior to the research. CHO Kyu-jin and KIM Ho-Young (professors of mechanical engineering) led the development of the water-strider robot.

- Working together for wearable kidney machine
  SNU researchers in science, engineering and medicine have worked on a project named ‘wearable kidney machine’. Professors in mechanical engineering analyzed core functions of the dialysis machine, and chemistry professors made new compounds for the wearable machine, while medical professors conducted all the clinical research. The project was led by KIM Hee Chan, professor of biomedical engineering.

Beyond academic borders

- A wearable electronic skin patch
  HYEON Taeghwan and KIM Dae-Hyeong, professors of biochemical engineering designed a wearable electronic skin patch in which a built-in electronic chip is able to monitor and treat diseases. When commercialized, people will be able to conveniently attach electronic healthcare devices embedded with medicine and a computer onto their bodies like a patch.

- Building a database of patient experience
  No matter how common a disease is, it presents a challenge to individuals who must suffer from it. KANG Chang-Uh, professor of German, built a narrative database of disease experiences interviewing over 300 patients and their families for five years, and shared it online. The database is not only visited by patients, but also used as part of the curriculum for medical students.

- A tiny robot that mimics water-strider’s movement
  An SNU research team created a mechanical insect that can mimic water-striders’ movements. The robot was as tiny as 68mg, but could jump up to 14cm 16 times in a row without complicated controls of artificial intelligence. Professors in the biological sciences observed water-striders’ extreme movements prior to the research. CHO Kyu-jin and KIM Ho-Young (professors of mechanical engineering) led the development of the water-strider robot.

- Working together for wearable kidney machine
  SNU researchers in science, engineering and medicine have worked on a project named ‘wearable kidney machine’. Professors in mechanical engineering analyzed core functions of the dialysis machine, and chemistry professors made new compounds for the wearable machine, while medical professors conducted all the clinical research. The project was led by KIM Hee Chan, professor of biomedical engineering.

Professors in mechanical engineering analyzed core functions of the dialysis machine, and chemistry professors made new compounds for the wearable machine, while medical professors conducted all the clinical research. The project was led by KIM Hee Chan, professor of biomedical engineering.
Global engagement

- **Nepal Solar Volunteer Corps**
  Nepal Solar Volunteer Corps demonstrates how one technology transfer can change a society. The Corps consists of engineering students and faculty who have extensive knowledge of energy systems. The volunteers choose one of the remote villages in Nepal which have no light or electricity. They conduct thorough research on the village’s natural energy and design a project to create localized and sustainable systems. The engineers include wind or water power as available, while establishing a basic system of solar energy. As a result, the villages have advanced in their economic development. The Corps also transferred the technology to engineers at Kathmandu University so that they can build even more energy systems in Nepal.

Community service

- **Mentoring for youth**
  SNU community members are committed to mentoring underprivileged teenagers. In the Future Talent School program, students and faculty members visit different remote villages and offer tutoring and counseling to secondary school students in an attempt to provide equal opportunities of education. Some of the students have grown up to become mentors themselves, creating a virtuous cycle.

- **Healing patients with music**
  SNU College of Music routinely holds free concerts at the university hospitals every year to enhance patient treatment through music. The college has departments of instrumental, vocal, and Korean music, all of which have participated in the concerts.

Knowledge sharing

- **Free online public lectures**
  SNU is actively engaged in sharing knowledge with the public by offering a variety of courses online. SNUON (SNU Open education), the university’s online platform, has been in service since 2012, and continues to receive over a million views. It also joined the Korean government’s integrated system Korean Massive Open Online Courses (K-MOOC), and the global web service edX.

- **Nepal Solar Volunteer Corps**
  Nepalese volunteers include wind or water power as available, while establishing a basic system of solar energy. The Corps also transferred the technology to engineers at Kathmandu University so that they can build even more energy systems in Nepal.

- **JW LEE – SEOUL project**
  Dr. LEE Jong-wook, the late former director-general of World Health Organization (WHO), was an SNU graduate who devoted his life to providing medical assistance services to as many people as possible around the globe. The SNU College of Medicine created a medical aid program honoring his name and spirit. Through the JW LEE-SEOUL project, SNU invites medical practitioners from developing countries to Seoul and provides them with up-to-date clinical training.

- **Supporting future leaders in developing countries**
  In the 1950s, the University of Minnesota invited 218 SNU Professors for further education and training, which had a huge impact on Korean society especially in agriculture, engineering, medicine and public administration. Passing on the legacy, SNU offers educational aids to scholarly talents in developing countries. The SNU President Fellowship (SPF) helps professors in developing countries pursue doctoral degrees, and the Public Sector Scholarship supports leaders of developing countries in further study.

Passing it on

- **Passing it on**
  In the 1950s, the University of Minnesota invited 218 SNU Professors for further education and training, which had a huge impact on Korean society especially in agriculture, engineering, medicine and public administration. Passing on the legacy, SNU offers educational aids to scholarly talents in developing countries. We have built strong partnerships internationally, including: scholarly exchanges with prestigious universities; collaborations with national flagship universities in every corner of the world; and strategic academic scholarships to aid underdeveloped countries.
Admissions

We seek students from a variety of backgrounds, recognizing that an internationalized population provides diverse perspectives and contributes to a dynamic learning atmosphere. Both undergraduate and graduate-level programs are open to international students. We offer admissions for international students every semester, as either International Admissions I (for foreign students) or International Admissions II (for Korean origin/foreign students educated outside of Korea).

Scholarships for International Students

- **SNU Global Scholarship**
  Full scholarship program for talented international students in both undergraduate and graduate degree programs. It provides recipients with full tuition, language education, residence, and living expenses. It includes the Public Sector Scholarship, a special aide for those who have work experience in the public sector and wish to study further in graduate program. As of 2014, 280 students had received this scholarship.

- **SNU Global Scholarship II**
  Tuition waiver scholarship for talented international students in undergraduate and graduate degree programs.

- **Graduate Scholarship for Excellent Foreign Students (GSFS)**
  Asian students who would like to study in specified graduate programs (subject to change every semester) are eligible to apply for this scholarship. The scholarship provides tuition exemption and living expenses.

- **Glo-Harmony Scholarship**
  Special program for applicants from developing countries on the DAC List of ODA Recipients. The program offers full tuition fee exemption and living expenses, and is available for both undergraduate and graduate applicants.

- **Silk Road Scholarship**
  Full scholarship program for graduate students in the field of humanities and social sciences.

Graduate degree program applicants from countries historically along with Silk Road are eligible to apply.

- **Korean War Memorial Scholarship**
  A full scholarship is offered to international students who are direct descendants of Korean War veterans.

- **International Students Scholarship**
  Merit-based scholarship for both undergraduate and graduate students. Undergraduate students who maintain a GPA of 2.4 or higher, and graduate students who maintain a GPA of 3.0 or higher can apply for this scholarship every semester and receive a partial waiver of tuition fee.

- **Asian Universities Network Scholarship (AUNS)**
  One year Korean language education support for Asian students from six specific universities – Sakhalin State University in Russia, National University of Mongolia, Vietnam National University - Ho Chi Minh City, Vietnam National University – Hanoi, Chulalongkorn University in Thailand, National University of Laos. (qualified institutions as of 2015). A full scholarship for graduate degree program is available for those who graduated from Yanbian University in China.
